

JULY 2020

trip highlight: KANGAROO FIELDS

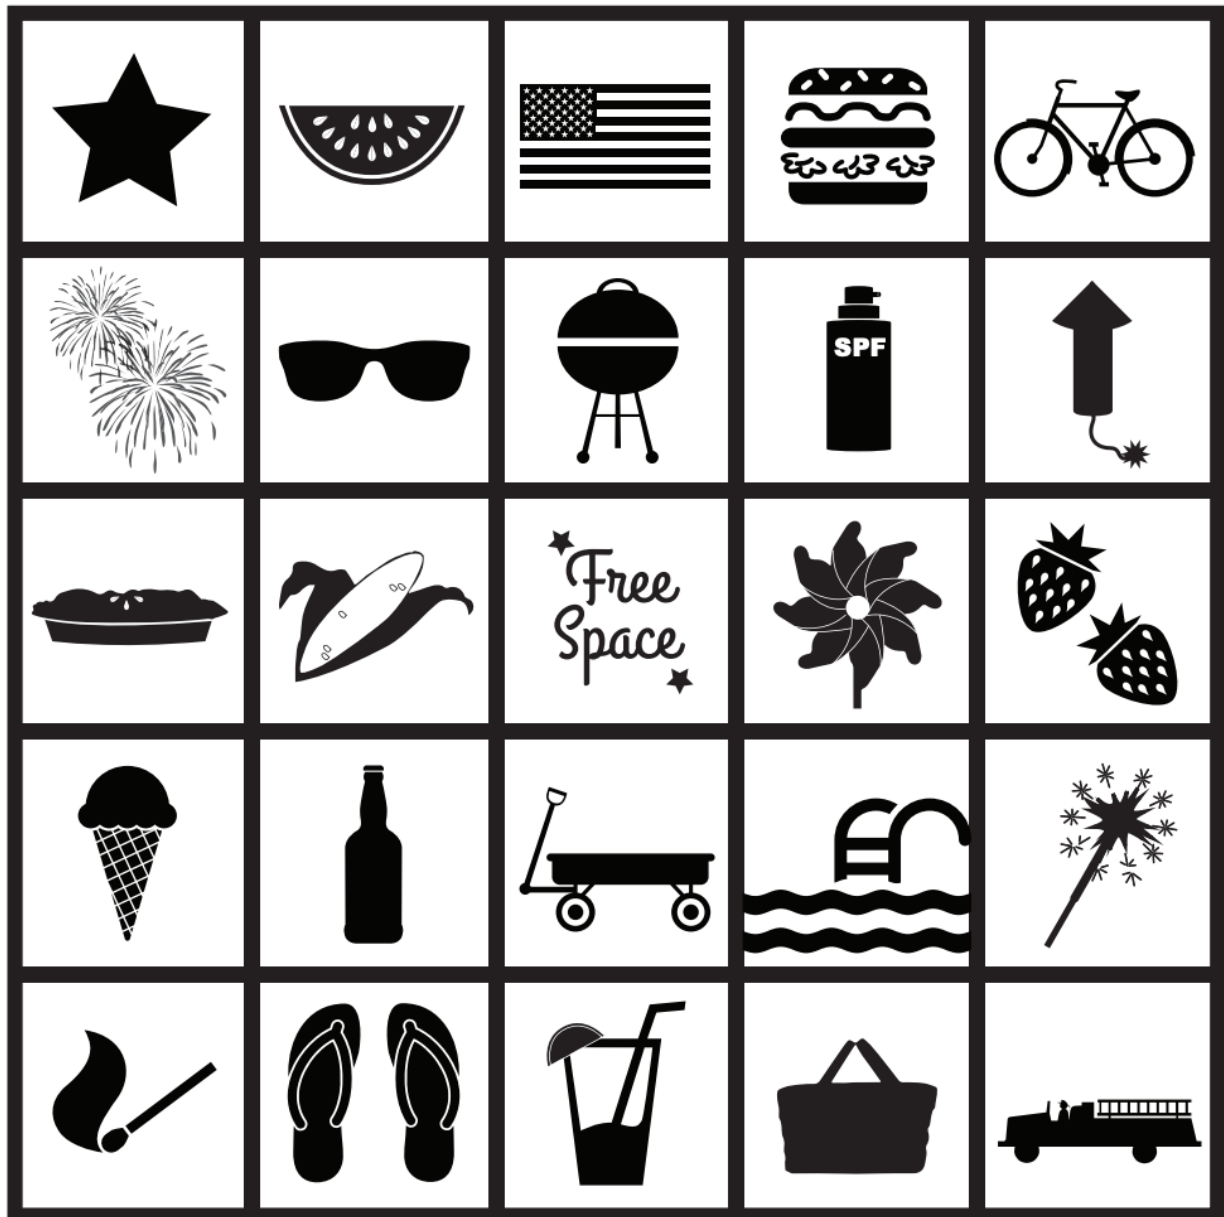

The kangaroo fields are an athlete favorite. Every trip they get the opportunity to visit these grasslands and view kangaroos in their natural habitat! Did you know that kangaroos live in the wild only in Australia?

There are even more kangaroos in Australia than there are people! A male kangaroo is called a boomer and a female is a jill, while babies are referred to as joeys. Did you know that they also have nocturnal tendencies? They are most active between sunset and sunrise, but it's not uncommon to find them out during the day as well.
